LABORATORY ASSIGNMENT 1

Conditional Statements in Python

University: Karabakh University
Faculty: Faculty of Engineering
Student Name: Elchin Abdurehimov
Instructor: Shamil Humbatov

1. Objective

The aim of this laboratory work is to learn conditional statements in Python and solve simple problems using if, elif, and else.

2. Task 1: BMI Calculator

This program calculates the Body Mass Index (BMI) using weight and height. It displays the BMI value and its category.

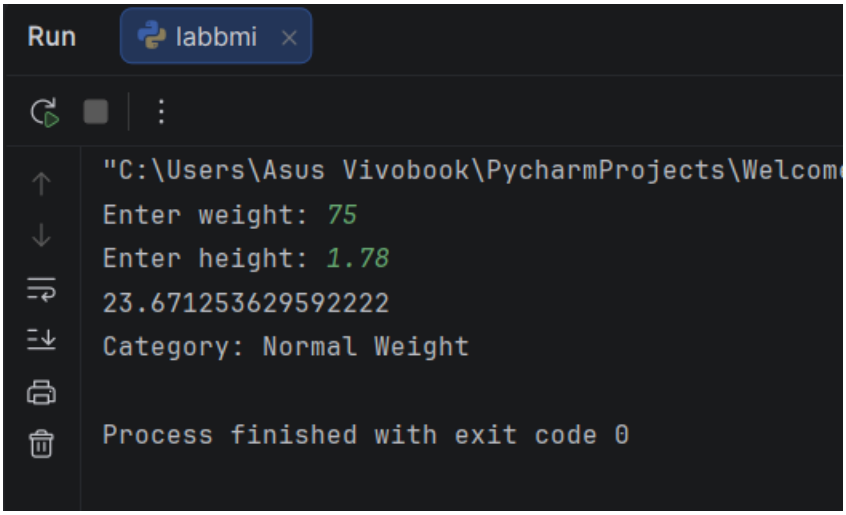

Formula: BMI = Weight / (Height × Height)

3. Task 2: Chinese Zodiac Calculator

This program asks for the user's birth year and determines the Chinese Zodiac animal using the modulo operator (%) and conditional statements.

4. Task 3: Birthday Guessing Game

This program guesses the user's birthday using five sets of numbers. The user answers Yes or No for each set, and the program calculates the birthday.

```
"C:\Users\Asus Vivobook\PycharmProjects\W
Enter your birth year: 2009
Ox

Process finished with exit code 0
```

```python
weight = float(input("Enter weight: "))
height = float(input("Enter height: "))
bmi = weight / (height * height)
print(bmi)
if bmi < 18.5:
    print("Category: Underweight")
elif  bmi > 18.5 and bmi < 24.9:
    print("Category: Normal Weight")
elif bmi > 25 and bmi < 29.9:
    print("Category: Overweight")
else:
    print("Category: Obese")
```

```
Is your birthday included in this set1: 1 for Yes, 0 for No0
Is your birthday included in this set2: 1 for Yes, 0 for No1
Is your birthday included in this set3: 1 for Yes, 0 for No1
Is your birthday included in this set4: 1 for Yes, 0 for No0
Is your birthday included in this set5: 1 for Yes, 0 for No0
Your birthday is: 6

Process finished with exit code 0
```

```python
year = int(input("Enter your birth year: "))
remainder = year % 12
if remainder == 0:
    print("Monkey")
elif remainder == 1:
    print("Rooster")
elif remainder == 2:
    print("Dog")
elif remainder == 3:
    print("Pig")
elif remainder == 4:
    print("Rat")
elif remainder == 5:
    print("Ox")
elif remainder == 6:
    print("Tiger")
elif remainder == 7:
    print("Rabbit")
elif remainder == 8:
```

```python
set1 = [1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21, 23, 25, 27, 29, 31]
set2 = [2, 3, 6, 7, 10, 11, 14, 15, 18, 19, 22, 23, 26, 27, 30, 31]
set3 = [4, 5, 6, 7, 12, 13, 14, 15, 20, 21, 22, 23, 28, 29, 30, 31]
set4 = [8, 9, 10, 11, 12, 13, 14, 15, 24, 25, 26, 27, 28, 29, 30, 31]
set5 = [16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31]
birthday = 0
a = int(input("Is your birthday included in this set1: 1 for Yes, 0 for No"))
if a == 1:
    birthday = birthday + 1
a = int(input("Is your birthday included in this set2: 1 for Yes, 0 for No"))
if a == 1:
    birthday = birthday + 2
a = int(input("Is your birthday included in this set3: 1 for Yes, 0 for No"))
if a == 1:
    birthday = birthday + 4
a = int(input("Is your birthday included in this set4: 1 for Yes, 0 for No"))
if a == 1:
    birthday = birthday + 8
a = int(input("Is your birthday included in this set5: 1 for Yes, 0 for No"))
```

```python
weight = float(input("Enter weight: "))
height = float(input("Enter height: "))
bmi = weight / (height * height)
print(bmi)
if bmi < 18.5:
    print("Category: Underweight")
elif  bmi > 18.5 and bmi < 24.9:
    print("Category: Normal Weight")
elif bmi > 25 and bmi < 29.9:
    print("Category: Overweight")
else:
    print("Category: Obese")
```

```
Is your birthday included in this set1: 1 for Yes, 0 for No0
Is your birthday included in this set2: 1 for Yes, 0 for No1
Is your birthday included in this set3: 1 for Yes, 0 for No1
Is your birthday included in this set4: 1 for Yes, 0 for No0
Is your birthday included in this set5: 1 for Yes, 0 for No0
Your birthday is: 6

Process finished with exit code 0
